

Outdoor Living with Natural Gas

- Outdoor living is one of the hottest trends for homeowners.
- Natural gas appliances make it easy and convenient to extend the outdoor living season without the worries of running out of fuel.
- Stylish products—from simple to high-tech—help you customize your outdoor room.

The Living Room Outside Your Door

More and more Americans are rethinking the backyard. Instead of a landscape, it's becoming an extension of living space—an important area for gathering, socializing and entertaining.

An outdoor room can be as simple as a grilling area or an entire backyard oasis. Many gas products are available to enhance your outdoor experience:

- **Grills** start with the push of a button and are ready to cook in minutes. They also regulate heat more easily and allow you to cook at several temperatures simultaneously.
- **Fireplaces** are available in many styles and sizes. They can be surrounded by granite, tile, stone or any other material to match the style of your home.
- **Firepits** can be built-in or portable. They radiate heat in a complete circle, similar to a campfire.
- **Patio heaters** are popular for all outdoor spaces. They can radiate heat 20 to 25 feet in all directions. Patio heaters can be free-standing, or they can be post-, wall- or ceiling-mounted.
- **Pool and spa heaters** are very efficient. They can heat water seven to ten times faster than an electric heater.
- **Gaslights** are a great way to add style and ambiance to your outdoor room. Lanterns, torches and pathway lighting are available to match any outdoor room design. Plus, gaslights do not attract insects.

Get Connected—Quickly and Safely

Gas convenience outlets are a great way to add versatility and safety to your outdoor room.

Gas Convenience Outlets:

- Make installing and moving your gas appliances almost as easy as plugging and unplugging electrical appliances.
- Increase appliance portability so you can redesign your outdoor space and reposition your appliances at any time.
- Feature an automatic shut-off valve, which prevents gas from flowing unless the appliance is connected correctly.
- Allow you to easily and safely disconnect and store your appliances when the outdoor season is over.
- Help ensure that you never run out of fuel by using natural gas instead of wood or propane.
