

WARM WEATHER TIPS

Insulation and sealing air leaks will improve your home's energy performance.

Adjust your home's **thermostat** up two degrees to help manage cooling costs.

Cook outdoors on your grill; use a microwave or crockpot or prepare cold meals.

Keep **curtains/blinds** closed on hot days to decrease room temperature.

Ceiling fans help circulate cool air and make rooms more comfortable

Plant trees or shrubs to **shade air conditioning units**, but do not block the airflow.
