

# National Fuel Gas Company Accepts U.S. Environmental Protection Agency's Methane Challenge

We are pleased to announce National Fuel's acceptance into the U.S. Environmental Protection Agency's (EPA) Natural Gas STAR Methane Challenge Program. This voluntary program is designed to provide a transparent platform for utilities, pipeline and storage companies, and energy producers to make, track, and communicate commitments to reduce methane emissions.

Each participating subsidiary of National Fuel is making independent commitments under the Methane Challenge Best Management Practices that are appropriate to its business with the expectation to further reduce methane emissions. National Fuel's companies have committed to analyze new and innovative approaches for further emission reduction and to explore the applicability of future best management practices or expansions of current best practices.
